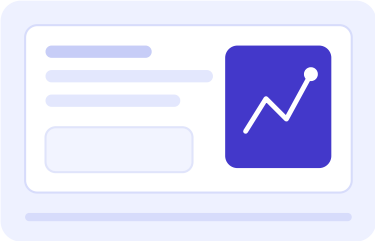
RENDERING SERVICE

Northwind Press

Turn HTML templates into print-exact PDFs at scale — with the same bytes out today, next quarter and four years from now.



2.4s	99.97%	40+	SOC 2
P95 RENDER, 24PP	BYTE-STABLE RE-RENDERS	TEMPLATES PER TENANT	TYPE II, ANNUAL

WHAT YOU GET

Fast by default

A warm pool of renderer processes, no cold starts, and a queue that drains under burst without dropping jobs.

Locked down

Network egress disabled per render, private address ranges always blocked, and every template sandboxed from every other.

Observable

Per-template latency, failure and size metrics, plus a retained sample of the exact payload behind any failed render.

Versioned templates

Every template edit is a new immutable version. Pin a version per environment and roll back in one call.

One endpoint

POST your template ID and data, get back a PDF. Async jobs, webhooks and pre-signed download URLs when you need them.

Reproducible

Pinned fonts, a frozen clock and normalised PDF metadata, so an archived document re-renders byte for byte.

SPECIFICATIONS

Page sizes	A3–A6, Letter, Legal, custom mm
Font handling	Pinned manifest, per-tenant uploads
Max document	1,200 pages / 250 MB
Retention	Configurable, 0–365 days
Uptime SLA	99.9% (99.95% on Scale)

INCLUDED IN EVERY PLAN

- Template editor with live preview and sample data
- Unlimited template versions and instant rollback
- Webhook delivery with signed payloads
- Audit log of every render, retained for 90 days
- Email support with a four-hour first response

Render your first document in about ten minutes.

Free tier includes 500 renders a month, every feature, no card required.
