RESEARCH STATEMENT

My research concerns the environmental fate of fluorinated organic compounds in freshwater systems, with an emphasis on transformation pathways that conventional monitoring programmes do not capture. The group combines high-resolution mass spectrometry, controlled mesocosm experiments and reactive-transport modelling to trace compounds from point of discharge through sediment and biota.

Over the past six years this work has produced the first field-validated degradation model for short-chain perfluoroalkyl acids in temperate river systems, a shared open dataset covering forty-one catchments, and analytical methods now adopted by three national monitoring agencies. Current funded projects extend the approach to estuarine mixing zones and to the risk posed by fluorinated pharmaceuticals in reclaimed irrigation water.

I supervise a group of nine — four doctoral researchers, two postdoctoral fellows and three technicians — and teach analytical and environmental chemistry across the undergraduate and taught-postgraduate programmes.

RESEARCHERS
SUPERVISED

ACADEMIC APPOINTMENTS

2021 — present	Associate Professor of Environmental Chemistry <i>Northmoor University, London, UK</i> Director of the Freshwater Contaminants Laboratory; deputy lead of the Water Futures research theme.
2017 — 2021	Senior Lecturer in Analytical Chemistry <i>Northmoor University, London, UK</i> Established the high-resolution mass spectrometry facility and its shared-access programme.
2014 — 2017	Lecturer in Chemistry <i>University of Ashcombe, Ashcombe, UK</i> Convenor of the MSc Environmental Analysis programme.
2011 — 2014	Postdoctoral Research Fellow <i>Institute for Water Research, ETH-adjacent consortium, Zurich, Switzerland</i> Marie Skłodowska-Curie individual fellowship on organofluorine sediment partitioning.

EDUCATION

- 2007 — 2011 **PhD, Analytical and Environmental Chemistry**
University of Coimbra, Coimbra, Portugal
Thesis: “Trace-level determination and transformation of perfluoroalkyl substances in river sediments” — advisor: Prof. Helena Marques.
- 2005 — 2007 **MSc, Chemistry (Analytical specialisation)**
University of Coimbra, Coimbra, Portugal
Thesis: “Solid-phase microextraction of halogenated aromatics from estuarine water” — advisor: Prof. Rui Salgado.
- 2001 — 2005 **Licenciatura, Chemistry**
University of Porto, Porto, Portugal

RESEARCH FUNDING

G1	Estuarine fate of fluorinated pharmaceuticals (ESTU-FATE) Natural Environment Research Council · NE/Z004471/1 · 2025 — 2029 · Principal Investigator	£1,840,000
G2	National open dataset for organofluorine occurrence Environment Agency / Defra · EA-2023-0918 · 2023 — 2027 · Principal Investigator	£920,000
G3	High-resolution mass spectrometry shared facility upgrade Wolfson Infrastructure Fund · WIF-2022-0441 · 2022 — 2024 · Principal Investigator	£640,000
G4	Biofilm-mediated defluorination in temperate rivers Leverhulme Trust · RPG-2021-183 · 2021 — 2024 · Co-Investigator	£498,000
G5	Passive sampling network for catchment monitoring European Research Consortium for Water · ERCW-19-2207 · 2019 — 2022 · Work-package lead	£412,000
G6	Marie Skłodowska-Curie Individual Fellowship European Commission · MSCA-IF-2011-299104 · 2011 — 2014 · Fellow	£286,000

Total awarded as principal or co-investigator: £4,596,000. Figures are the value attributed to the host institution at award.

TEACHING

COURSE	LEVEL	INSTITUTION	TERMS	ENROLMENT
CHM2107 — Analytical Chemistry II	Undergraduate, year 2	Northmoor	12	180
CHM3311 — Environmental Chemistry	Undergraduate, year 3	Northmoor	9	95

COURSE	LEVEL	INSTITUTION	TERMS	ENROLMENT
CHM4402 — Advanced Mass Spectrometry	MSc	Northmoor	8	34
CHM4419 — Research Design and Data Practice	MSc	Northmoor	6	42
ENV5001 — Contaminant Fate Modelling	Doctoral training	Water Futures DTP	5	18
CHM2204 — Instrumental Methods (laboratory)	Undergraduate, year 2	Ashcombe	6	120

Research Supervision

2024 — present	Bisi Okonkwo — PhD <i>Estuarine attenuation of fluorinated pharmaceuticals</i> In progress, year 2 — first paper published 2026.
2023 — present	Cara R. Bell — PhD <i>Automated non-target screening workflows</i> In progress, year 3 — submitting thesis autumn 2026.
2022 — 2026	Raj Sandhu — PhD <i>Uncertainty in catchment contaminant budgets</i> Awarded 2026; now postdoctoral fellow, Northmoor.
2019 — 2023	Sora Nakamura — PhD <i>Matrix effects in trace organofluorine quantification</i> Awarded 2023; now analytical lead, national reference laboratory.
2018 — 2021	Marie Duval — PhD <i>Seasonal organofluorine flux in peat catchments</i> Awarded 2021; now lecturer, University of Ashcombe.
2016 — present	Twenty-two MSc dissertations — MSc <i>Analytical and environmental chemistry projects</i> All completed; four led to co-authored publications.

INVITED TALKS & CONFERENCE PRESENTATIONS

June 2026	What monitoring programmes still miss <i>International Conference on Emerging Contaminants, Lisbon, Portugal</i> Plenary lecture
March 2026	Open data as research infrastructure <i>Royal Society of Chemistry Analytical Division Symposium, Manchester, UK</i> Invited talk
September 2025	Modelling estuarine mixing zones <i>SETAC Europe Annual Meeting, Copenhagen, Denmark</i> Contributed talk
May 2025	Twelve years of organofluorine monitoring: what changed <i>National Water Quality Forum, Edinburgh, UK</i> Keynote
November 2024	Non-target screening for regulators <i>European Mass Spectrometry Conference, Vienna, Austria</i> Invited talk

July 2023	Biofilms and defluorination <i>Gordon Research Conference on Environmental Sciences, Holderness, USA</i> Contributed talk and poster
April 2022	Building a shared analytical facility <i>UK Research Infrastructure Meeting, Birmingham, UK</i> Panel contribution

AWARDS & HONOURS

2026	Analytical Science Medal <i>Royal Society of Chemistry</i>
2025	Fellowship of the Royal Society of Chemistry (FRSC) <i>Royal Society of Chemistry</i>
2024	Northmoor University Prize for Research Supervision <i>Northmoor University</i>
2022	Open Research Award <i>UK Reproducibility Network</i>
2018	Early Career Researcher Prize <i>Society for Environmental Geochemistry</i>

PROFESSIONAL SERVICE

- Associate Editor, Environmental Science: Processes & Impacts (2023 — present).
- Editorial board member, Journal of Environmental Monitoring Practice (2021 — present).
- Regular reviewer for Environmental Science & Technology, Water Research, Analytical Chemistry and Chemosphere; approximately 25 reviews a year.
- Panel member, Natural Environment Research Council discovery-science grants panel (2024 — present).
- Expert adviser to the national drinking-water inspectorate on organofluorine limit setting (2022 — present).
- Chair, Departmental Research Ethics Committee, Northmoor University (2021 — 2025).
- Scientific committee, International Conference on Emerging Contaminants (2023, 2025, 2026).
- Founder and coordinator of the Freshwater Data Commons, a shared repository used by eleven institutions.

TECHNICAL SKILLS & LANGUAGES

Analytical: LC-HRMS (Orbitrap, Q-TOF), GC-MS/MS, ion chromatography, passive sampling, non-target and suspect screening, method validation to ISO 17025

Computational: Python (pandas, scikit-learn), R, reactive-transport modelling (PHREEQC, custom solvers), MZmine, Bayesian uncertainty analysis, reproducible workflows with git and containers

Languages: Portuguese (native), English (fluent), Spanish (fluent), German (working knowledge)
