

AT A GLANCE

What to expect

Your first appointment is 55 minutes. We spend the first half of it working out what is actually going on — history, movement screen, and the specific thing you cannot currently do — and the second half starting treatment.

You leave with a written plan, two or three exercises you will actually do, and a realistic timeline. If physiotherapy is not the right answer, we will say so.

- ✓ No referral needed — book directly
- ✓ Evening appointments until 8pm on weekdays
- ✓ Written plan and exercise video links after every session
- ✓ Direct billing to most major insurers

HOW WE WORK

Fewer exercises, done properly

Most people arrive having been given a sheet of twelve exercises they stopped doing in week two. We do the opposite: two or three movements, chosen because they address the specific limitation we found, progressed every time we see you.

That means each session starts by checking what changed. If an exercise is not producing a measurable difference within a fortnight, it is the wrong exercise and we change it rather than asking you to try harder.

- ✓ **Assess** — movement screen, strength testing and a clear explanation of the findings
- ✓ **Treat** — hands-on work where it helps, loading where it helps more
- ✓ **Progress** — measured every session, adjusted every fortnight
- ✓ **Discharge** — with a maintenance plan, not an open-ended appointment

"Two exercises. Two. After a year of a twelve-item sheet I never opened, I did two exercises and could run again by August."

45 minutes · gym-based, in our ground-floor studio

Running gait analysis £95

75 minutes · treadmill video, footwear review, written report

Phone consultation Free

10 minutes · is physiotherapy the right answer for you?

YOUR FIRST VISIT

From booking to back to it

You do not need a GP referral, and you do not need to know what is wrong. Bring the thing you cannot do and we will work backwards from there.

THE PROCESS

- 1 **Book** — online, by phone, or by walking in. Evening slots are the first to go.
- 2 **Arrive** — in clothing you can move in. Bring any scans or letters if you have them.
- 3 **Assessment** — we find the limitation, explain it in plain language, and start treatment the same session.
- 4 **Plan** — two or three exercises, a timeline and a written summary in your inbox that evening.
- 5 **Review** — we measure the change every session and progress or change the plan accordingly.
- 6 **Discharge** — with a maintenance routine and an open door if it flares up again.

"They told me at the assessment that I would need six sessions. It was six. Nobody in healthcare has ever given me a number that turned out to be true before."
